

Convio Web Services Release 1.15

Version 1.15 of Convio Web Services is now available. Please see release notes below for further details on what is included in this release.

Release Notes

This release adds Query method support for Payment and RecurringPayment data.

Defect Fixes

None.

Application Behavior Changes

The following changes have been made in this release:

- **TeamRaiserEvent** type adds the **Country** field.
- **TeamRaiserGift** type adds **RecurringPayment** and **IsRegistration** fields.
- **RecurringPayment** type adds **CreationDate**, **CreatedBy**, **ModifyDate**, and **LastChangeBy** fields.
- Added **TransactionPayment** type to support direct query of **Payment**.
- **RecurringPayment** type adds support for **Query** method.

Known Issues

Bug #56649 — Specifying a **PageSize** parameter for a **GetIncrementalInserts**, **GetIncrementalUpdates**, **GetIncrementalDeletes** operation that is different from the **PageSize** parameter specified for the previous corresponding **GetIncrementalInsertsCount**, **GetIncrementalUpdatesCount**, or **GetIncrementalDeletesCount** operation in a sync session results in unexpected behavior. If a larger **PageSize** is specified in subsequent calls, only the number of records specified in corresponding **GetIncremental...Count** call is returned. If a smaller **PageSize=*n*** is specified, only the first *n* records are returned for each Page resulting in records being skipped in the page sequence. To work around this issue, always specify the same **PageSize** for all **GetIncremental*** calls within the same sync session.
