Convio Web Services Release 1.13

Version 1.13 of Convio Web Services is now available. Please see release notes below for further details on what is included in this release.

Release Notes

This release consists of fixes for customer-reported defects and for a functional regression found during testing of the Winter 2012 release, which are summarized below.

The following field is added to the **TeamRaiserRegistration** type:

- **FundraisingGoal** – The dollar amount of the participant's fundraising goal, if a goal was specified at registration.

The online Convio Web Services Documentation has been updated to reflect the changes in this release.

Defect Fixes

Bug #59771 — The **HomeCounty** field moved from the **Constituent** to the **Address** (HomeAddress) object in the Winter 2012 release, which accidentally changed the CWS WSDL schema. This change was detected in regression testing and is resolved by this patch.

Bug #55390 — Previously the field selection list in the Download tab on the CWS Console showed a subset of fields for some record types. Now all fields are included.

Known Issues

Bug #56649 — Specifying a PageSize parameter for a GetIncrementalInserts, GetIncrementalUpdates, GetIncrementalDeletes operation that is different from the PageSize parameter specified for the previous corresponding GetIncrementalInsertsCount, GetIncrementalUpdatesCount, or GetIncrementalDeletesCount operation in a sync session results in unexpected behavior. If a larger PageSize is specified in subsequent calls, only the number of records specified in corresponding GetIncremental…Count call is returned. If a smaller PageSize=n is specified, only the first n records are returned for each Page resulting in records being skipped in the page sequence. To work around this issue, always specify the same PageSize for all GetIncremental* calls within the same sync session.
